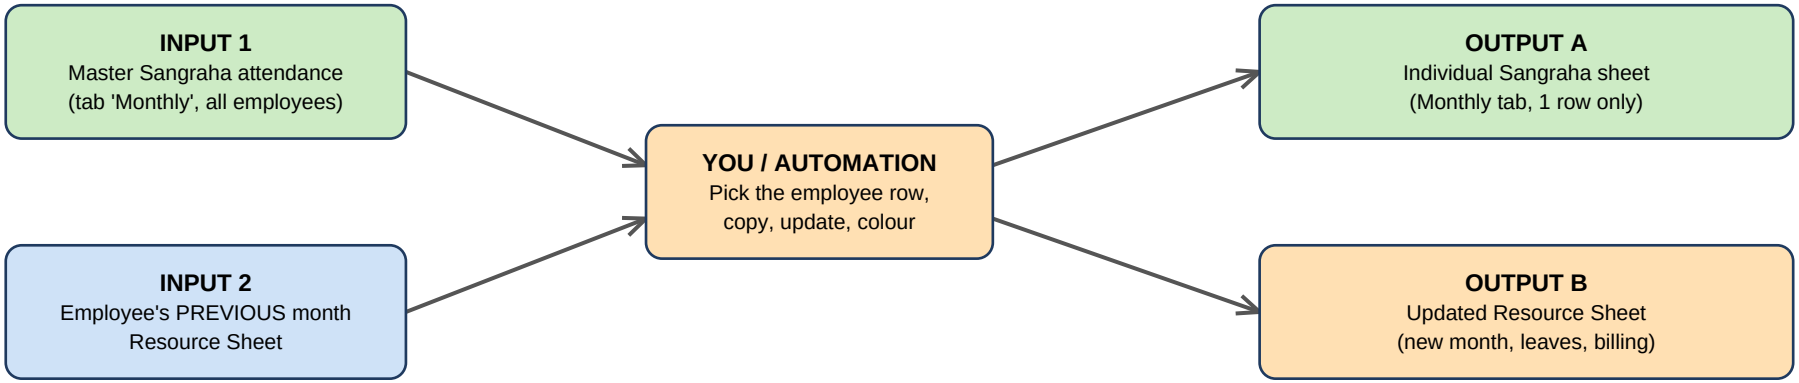
Monthly Attendance & Resource Sheet - Manual Process Guide

How to produce, by hand, the two monthly files for each employee. This is exactly what the automation will do, so it doubles as the specification. Examples use the real sample files (**June_Infinity.xlsx**, **Resource Sheet-Rahul-June.xlsx**, **Sangraha (June-2026).xlsx**).

1. The big picture



- Copied from PREVIOUS resource sheet
- Taken from MASTER attendance sheet
- Calculated / formula
- The employee row you are working on

Rule of thumb: one employee = two output files. Repeat the steps for every employee you need.

2. Input 1 - Master Sangraha attendance (June_Infinity.xlsx, tab 'Monthly_June_Infinity')

This file has **one row per employee**. Use only the Monthly tab (ignore 'Daily Attendance' / Weekly tabs). Find the employee's row by **Vendor Resource ID** (or name). The yellow row below is Rahul Desai. Green headers are the columns used for the Resource Sheet.

	A Month/Year	B Vendor ID	C Vendor Resource ID	D Resource Name	E Principal Vendor Co.	F SPOC	G HOD	H Present	I Absent	J Leave	K CompOff	L Holiday	M WeekOff	N Total
2	June 2026	VMT00001	TE000001	Richa B	Infinity Analytics	Shivam Panchal	Gaurav Bansal	17	0	5	0	0	8	30
3	June 2026	VMT00002	TE000002	Aakash Singh	Infinity Analytics	Varun Anguralia	Gaurav Bansal	20	0	2	0	0	8	30
4	June 2026	VMT00003	TE000003	Rahul Singh	Infinity Analytics	Varun Anguralia	Gaurav Bansal	22	0	0	0	0	8	30
5	June 2026	VMT00004	TE000004	Rahul Desai	Infinity Analytics	Sourav Thakur	Gaurav Bansal	22	0	0	0	0	8	30
6	June 2026	VMT00005	TE000005	Raman Rao	Infinity Analytics	Sourav Thakur	Gaurav Bansal	0	22	0	0	0	8	30
7	June 2026	VMT00007	TE000007	Maitri Kaur	Infinity Analytics	Kamlesh Kumar	Gaurav Bansal	9	17	4	0	0	0	30
...														

Columns we take from this sheet

Master column	Used for	Goes into Resource Sheet column
C - Vendor Resource ID / D - Resource Name	Finding the employee	(lookup key only)
H - Present Days	Days the employee worked	N - Days Present
J - Leave Days	Leaves taken this month	K - Leave Taken monthly AND added to G - Leave taken till date
L - Holiday Days	Public holidays	L - Holiday
M - WeekOff Days	Weekly offs	M - Week Off
I - Absent Days	NOT billed - not used directly	(absent days simply do not count in Billing Days)

3. Input 2 - Employee's previous Resource Sheet (Resource Sheet-Rahul-June.xlsx)

This is the file you **clone**. Colours show what happens to each cell for the NEXT month (July).

	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q
2	Vendor Name	Attendance Month	01-Jun-2026													
3	Service Period	1st June	30th June													
4	Resource Name	Manager Name	Vendor ID	Role	Total Leave	Leave taken till date	Balance Leave	Rate/ Month	Total Billing Days	Leave Taken monthly	Holiday	Week Off	Days Present	Billing Days	Billing Amount	PO Number
5	Rahul Desai	Sayantan Thakur	TE000004	AI Product Manager	24	3	=F5-G5	100000	30	0	0	8	22	=K5+L5 +M5+N5	=I5/J5 *O5	LTFG/PO/2026 27/A330/...
19	Total														=SUM (P5:P18)	

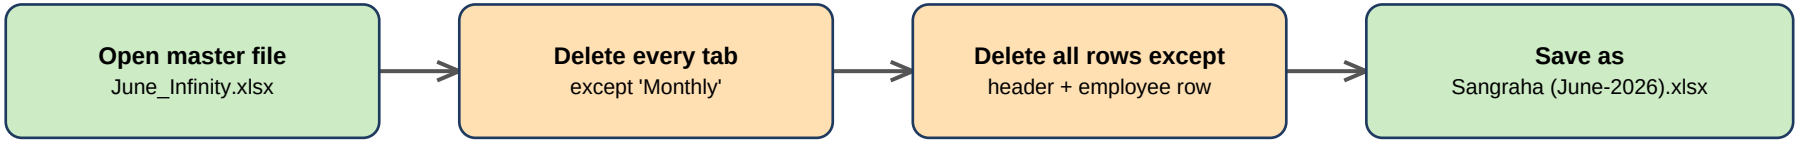
Red text in P (P only when amount < rate; Q always) is the formatting the client wants - the **letters** are red, the cell background stays as it is.

- Copied from PREVIOUS resource sheet
- Taken from MASTER attendance sheet
- Calculated / formula
- The employee row you are working on

Note: in the sample, the **Resource Name** in B5 matches 'Rahul Desai' in the master. H, O, P and the Total are formulas - keep them as formulas, do not paste values.

4. Output A - Individual Sangraha sheet

Goal: a copy of the master file that contains **only the Monthly tab** and **only one employee's row** (header row stays).



Result (what Sangraha (June-2026).xlsx looks like):

Month/Year	Vendor ID	Vendor Resource ID	Resource Name	Principal Vendor	SPOC	HOD	Present	Absent	Leave	CompOff	Holiday	WeekOff	Total
June 2026	VMT00557	TE000721	Rahul Desai	Infinity Analytics Consulting	Sayantan Thakur	Gaurav Goel	22	0	0	0	0	8	30

No calculation is needed for Output A - it is a pure filter. Nothing inside the row is changed.

5. Output B - Updated Resource Sheet: step by step

#	Step	Where	What to do
1	Clone	File	Copy the employee's previous resource sheet; save as e.g. 'Resource Sheet-Rahul-July.xlsx'
2	Rename month	D2, C3, D3, sheet name	Attendance Month = 01-Jul-2026; Service Period = '1st July' to '31st July'
3	Total billing days	J5	Days in the new month: Jan 31, Feb 28/29, Mar 31, Apr 30, May 31, Jun 30, Jul 31, Aug 31, Sep 30, Oct 31, Nov 30, Dec 31
4	Leaves this month	K5	= master column J (Leave Days) for the employee
5	Cumulative leave	G5	**New G = old G (previous sheet) + K5** (the BRD: previous cumulative + new leaves)
6	Holiday / Week off / Present	L5, M5, N5	= master L (Holiday), M (WeekOff), H (Present)
7	Check	-	Present + Absent + Leave + Holiday + WeekOff + CompOff must equal Total Days in master (N) = J5
8	Formulas	H5, O5, P5, P19	Leave as formulas: H=F-G, O=K+L+M+N, P=I/J*O, Total=SUM(P5:P18)
9	Red flag on amount	P5	If P5 < I5 (amount less than monthly rate), make the NUMBER text red (cell fill unchanged)
10	PO number red	Q5	Always make the PO number text red (no fill)
11	Keep	F, I, B-E, Q	Total Leave, Rate, Name, Manager, Vendor ID, Role, PO number are unchanged

Billing formulas in one place

Billing Days (O) = Leave (K) + Holiday (L) + Week Off (M) + Days Present (N)

Billing Amount (P) = Rate/Month (I) / Total Billing Days (J) x Billing Days (O)

Flag: if Billing Amount (P) < Rate/Month (I) then P text = red.

Absent days are NOT in Billing Days, so every absent day reduces the bill.

6. Worked examples (July 2026, 31 days)

Assumed previous values (not in the sample): Total Leave F = 24, Rate = 100,000. Master numbers are taken from June_Infinity.xlsx; Rahul's July present days are assumed.

Example 1 - Rahul Desai (no problem, bill = rate)

Field	Source	Value	How
G Leave till date	Previous G + master J	3 + 0 = 3	carry forward + new leaves
H Balance leave	F - G	24 - 3 = 21	formula
J Total billing days	July	31	days in month
K Leave monthly	Master J	0	copy
L Holiday / M Week off	Master L / M	0 / 8	copy
N Days present	Master H	23 (assumed)	copy
O Billing days	K+L+M+N	0+0+8+23 = 31	formula
P Billing amount	I / J x O	100000/31 x 31 = 100,000	not below rate, so P stays black

A fully present employee has Present + WeekOff (+Holiday +Leave) = days in month, so O = J and the bill equals the rate.

Example 2 - Maitri Kaur (absent a lot, red flag) using June figures (30 days)

Field	Source	Value	How
G Leave till date	Prev G (assume 3) + master J (4)	3 + 4 = 7	carry forward + new leaves
H Balance leave	24 - 7	17	formula
J Total billing days	June	30	days in month
K / L / M / N	Master J / L / M / H	4 / 0 / 0 / 9	copy
O Billing days	4+0+0+9	13	formula
P Billing amount	100000 / 30 x 13	43,333.33	less than the rate -> RED text
Q PO number	-	unchanged	always RED text

7. Manual checklist (print this)

[ ]	Open master file, keep ONLY the 'Monthly' tab
[ ]	Find the employee row (Vendor Resource ID / Name)
[ ]	Output A: delete other rows -> save as 'Sangraha (Month-Year).xlsx'
[ ]	Open employee's previous Resource Sheet, 'Save as' for the new month
[ ]	Update D2, C3, D3 and the sheet name to the new month
[ ]	J = number of days in new month
[ ]	K, L, M, N = master Leave, Holiday, WeekOff, Present
[ ]	G = old G + K
[ ]	Check H, O, P formulas still work; P19 total
[ ]	If P less than I -> P text red
[ ]	PO number (Q) text red
[ ]	Quick check: Present + Absent + Leave + Holiday + WeekOff = days in month

8. Points to confirm with the client

- Match employee by Vendor Resource ID or name? (IDs in the sample files disagree: Rahul is TE000004 in the master but TE000721 / VMT00557 in the individual sheet.)
- Is 'Leave taken till date' in the previous sheet already including the previous month's leaves? (assumed yes)
- Does 'Total Leave' (F) reset in a new leave year (Jan or Apr)?
- Rounding of Billing Amount (2 decimals?) and should CompOff days be billed?
- Output naming and zip for many employees; what should happen if an employee is missing in the master?
